

Overseas Merchandise Trade: June 2011

Embargoed until 10:45am – 26 July 2011

Highlights

June 2011 quarter:

Values are seasonally adjusted and compared with the March 2011 quarter unless otherwise stated.

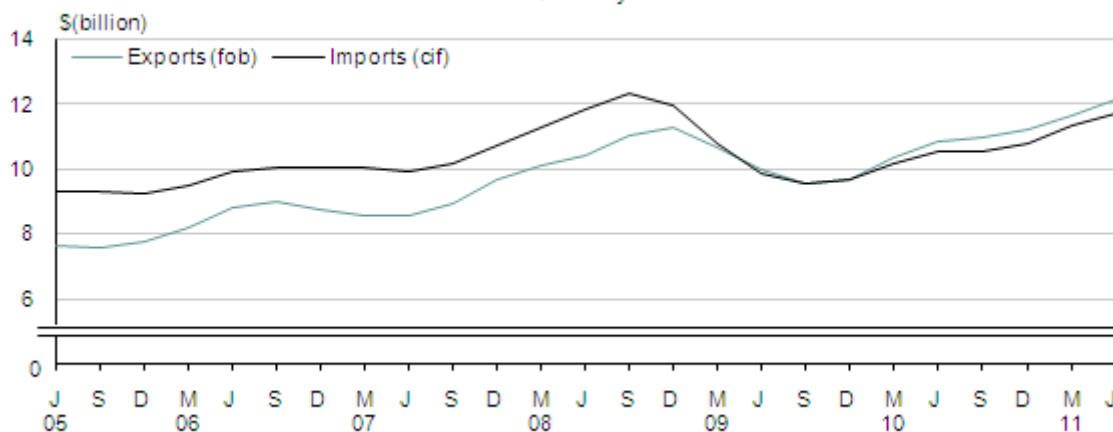

- Exports increased 4.5 percent to \$12.2 billion.
- Dairy products and meat accounted for nearly 80 percent of the increase.
- The trend for exports has reached a new high.
- Imports fell 1.0 percent to \$11.8 billion.
- The trend for imports has generally been increasing since September 2009.
- There was a trade surplus of \$362 million (3.0 percent of exports).

June 2011 month:

Values are actual and compared with the June 2010 month unless otherwise stated.

- Exports were up \$176 million (4.7 percent) to \$4.0 billion.
- Milk powder, butter, and cheese exports recorded the largest increase.
- Imports were up \$167 million (4.7 percent) to \$3.7 billion.
- Petroleum and products imports recorded the largest increase.
- There was a trade surplus of \$230 million (5.8 percent of exports).

Commentary

Seasonally adjusted exports – June 2011 quarter

The seasonally adjusted value of exported goods increased 4.5 percent (\$521 million) to \$12.2 billion in the June 2011 quarter. This follows 3.7 percent increases in the previous two quarters. Most of the increase in the June 2011 quarter took place in the April month, according to the monthly seasonally adjusted series.

The trend for goods exported, which reflects the long-term behaviour in export values, has increased 28 percent since the September 2009 quarter. The trend in exports has reached a new high, surpassing the previous peak in the March 2011 quarter.

Source: Statistics New Zealand

Key increases and decreases in seasonally adjusted export values in the June 2011 quarter were as follows:

- Milk powder, butter, and cheese recorded the largest increase, up 7.0 percent (\$200 million). This is the second consecutive, strong quarterly increase – in the March 2011 quarter, values were up 8.8 percent. Quantities were down 4.0 percent in the June 2011 quarter.
- Meat and edible offal products recorded the second-largest increase, up 12 percent (\$161 million), following a 2.9 percent increase in the previous quarter. Quantities were up 4.8 percent.
- Casein and caseinates, up 30 percent (\$51 million), recorded the next-largest increase, with quantities up 17 percent.
- Fruit was up 9.8 percent (\$34 million), with quantities up 12 percent.
- Mechanical machinery and equipment was up 7.7 percent (\$32 million).
- Logs, wood, and wood articles recorded the largest decrease, down 0.9 percent (\$7.5 million), following a 9.1 percent increase in the previous quarter. Quantities were down 10 percent for the current quarter.

Seasonally adjusted imports – June 2011 quarter

The seasonally adjusted value of imported goods decreased 1.0 percent to \$11.8 billion in the June 2011 quarter. This decrease follows two consecutive quarterly increases – 5.8 percent in the December 2010 quarter and 8.5 percent in the March 2011 quarter. The March 2011 and June 2011 quarters both included the one-off imports of aircraft and parts. If these one-offs were excluded from both quarters, seasonally adjusted imports in the June 2011 quarter would have increased 1.0 percent.

The trend for imports has generally been increasing since the September 2009 quarter, rising 22 percent over that time. The level of the trend is 4.9 percent below its overall peak in September 2008.

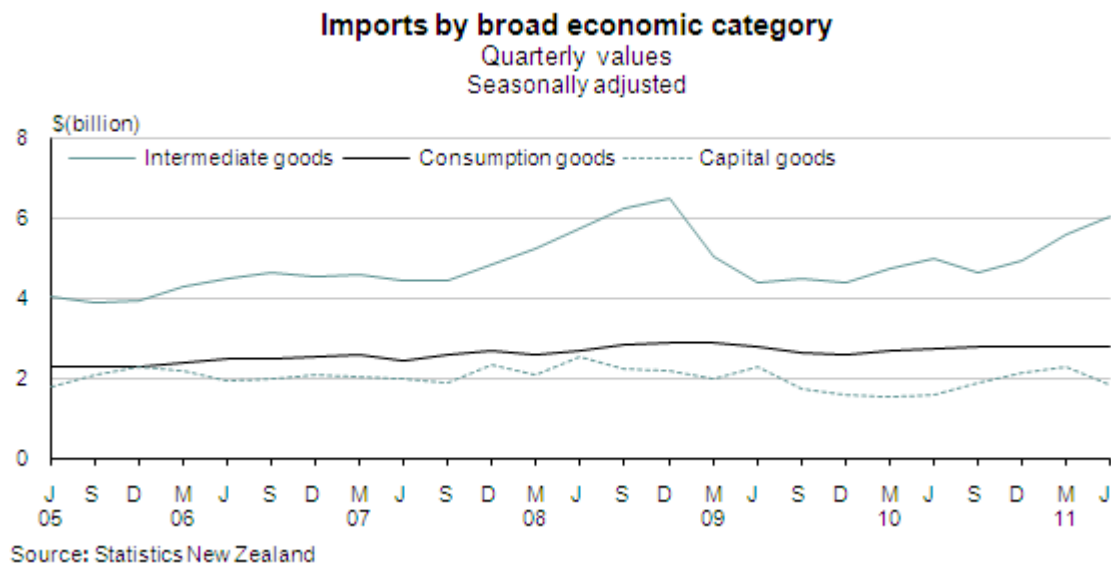

Merchandise imports

Quarterly

Source: Statistics New Zealand

Of the broad economic categories, capital goods, passenger motor cars, and petrol and avgas showed decreases in the June 2011 quarter compared with the March 2011 quarter. Intermediate goods, consumption goods, and military and other goods showed increases during the same period.

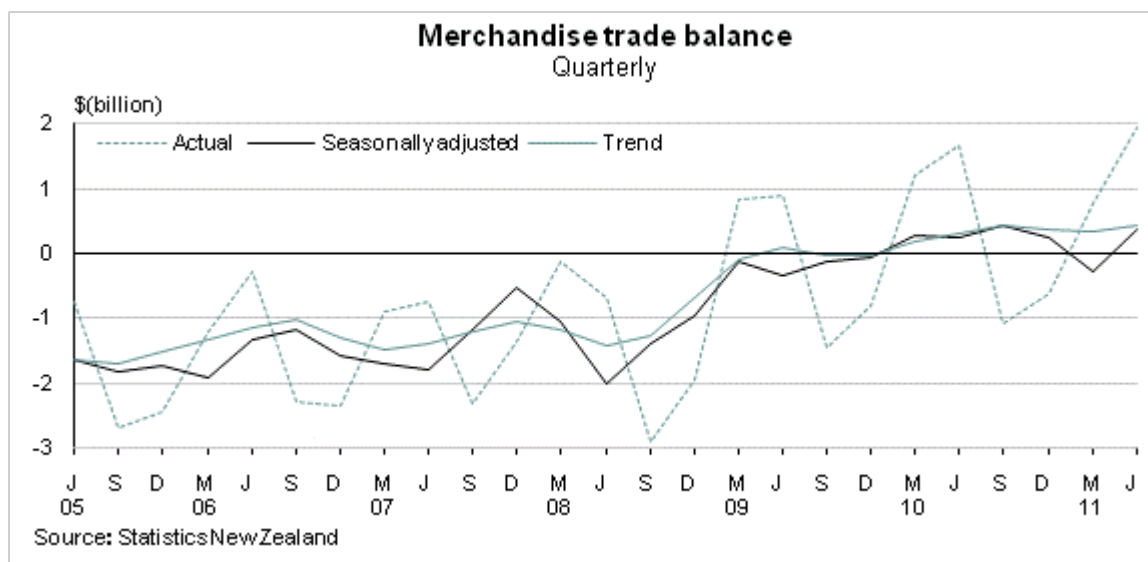

Key decreases and increases in seasonally adjusted import values in the June 2011 quarter were as follows:

- Capital goods decreased by 20 percent (\$456 million), mainly due to a fall in transport equipment (down 58 percent or \$416 million). Aircraft was the main contributor to the fall in transport equipment. The transport equipment series is not seasonally adjusted because it does not exhibit a regular seasonal pattern and can be significantly affected by large one-off imports.
- Passenger motor cars fell 8.3 percent (\$56 million), the fourth consecutive quarterly decrease.
- Petrol and avgas decreased 5.7 percent (\$22 million), following increases of 12 percent in the March 2011 quarter and 43 percent in the December 2010 quarter. Irregular shipments of these commodities can cause large percentage fluctuations in the series.
- Intermediate goods increased 8.3 percent (\$464 million). This was led by parts and accessories of transport equipment (up 55 percent or \$246 million) and crude oil (up 10 percent or \$135 million). Crude oil is imported in large, irregular shipments, which can cause large percentage fluctuations in the series.
- Military and other goods increased 23 percent (\$18 million), following three consecutive quarters of decreases. The increase in the June 2011 quarter was spread over a number of commodities, led by self propelled artillery weapons.
- Consumption goods were almost flat, up 0.2 percent (\$6 million), remaining at a similar level to the previous three quarters.

Seasonally adjusted trade balance – June 2011 quarter

In the June 2011 quarter there was a seasonally adjusted trade surplus (the value of exports exceeded that of imports) of \$362 million, equivalent to 3.0 percent of exports. This follows a seasonally adjusted deficit in the March 2011 quarter.

If the one-off importation of aircraft parts during the May month were excluded, the June 2011 quarter would show a seasonally adjusted trade surplus of \$577 million (4.7 percent of exports).

June 2011 month – actual values

Exports for the June 2011 month

In the June 2011 month, exported goods were valued at \$4.0 billion, up \$176 million (4.7 percent) from June 2010.

In the June 2011 month, compared with the June 2010 month, key increases and decreases in the value of exports by commodity and by country of destination were as follows:

By commodity:

- Milk powder, butter, and cheese exports recorded the largest increase, up \$90 million (11 percent), led by an increase in sweetened skimmed milk powder. Unsweetened whole milk powder and anhydrous milk fat were also significant contributors.

Milk powder, butter, and cheese exports

Monthly values and quantities

Source: Statistics New Zealand

- Aircraft and parts showed the second-largest increase, up \$59 million, a six-fold increase. Exports in this category can be very irregular.
- Meat and edible offal had the next-largest increase, up \$47 million (11 percent). This was led by frozen lamb cuts with bone in, for which both price and quantities were higher.
- Ships, boats, and floating structures recorded the largest decrease, down \$68 million (73 percent). This was driven by a decrease in the export of pleasure boats in June 2011. Exports in this category can also be very irregular.
- Mechanical machinery and equipment recorded the next-largest decrease, down \$29 million (17 percent), led by a decrease in elevators and conveyors. The increase was partly offset by an increase in pulp making machinery parts.

By country of destination:

- The United States of America recorded the largest increase, up \$39 million (11 percent). Increases in aircraft and parts, and casein and caseinates were partly offset by a decrease in fruit exports.
- Algeria recorded the second-largest increase, up \$26 million, led by unsweetened whole milk powder. This is more than three times the value of exports to Algeria in June 2010.
- Exports to Saudi Arabia increased \$22 million (41 percent), led by sweetened skimmed milk powder and anhydrous milk fat. This was partly offset by a decrease in sawn and chipped pinus radiata.
- Exports to Fiji also increased \$22 million, which was double the value of exports in June 2010. This was mainly due to the export of pleasure boats in June 2011.
- The British Virgin Islands recorded the largest decrease, down \$48 million, due to the export of pleasure boats in June 2010. There were no similar exports in June 2011.

Imports for the June 2011 month

In the month of June 2011, imported goods were valued at \$3.7 billion, up \$167 million (4.7 percent) from June 2010.

In the June 2011 month, compared with the June 2010 month, key increases and decreases in the value of imports by commodity and by country of origin were as follows:

By commodity:

- Petroleum and products recorded the largest increase, up \$62 million (9.3 percent), mainly due to crude oil. Partly offsetting the increase in crude oil was a fall in automotive diesel.
- Railway, tramway locomotives, rolling-stock and parts thereof recorded the second-largest increase, up \$43 million. This was due to the importation of rail locomotives and locomotive tenders (other than diesel-electric powered) of a weight exceeding 46 tonnes.
- Mechanical machinery and equipment recorded the next-largest increase, up \$33 million (7.6 percent). The largest contributors were turbo jet engines and turbine parts.
- Fertilizers increased \$30 million (143 percent), with urea the major contributor.
- Ships, boats, and floating structures had the largest decrease, down \$69 million (76 percent). This was due to the import of an offshore patrol vessel, the *HMNZS Wellington*, in June 2010.
- Vehicles, parts, and accessories had the second-largest decrease, down \$26 million (7.1 percent). This was led by a fall in new petrol cars with a 1500–3000 cc rating.

By country of origin:

- Due mainly to crude oil, imports from Qatar showed the largest increase, up \$137 million. This was more than double the June 2010 value. Increases for Russia, up \$103 million, and Kuwait, up \$62 million, were also due to increased crude oil imports. Iraq, down \$81 million, was again due to crude oil.
- China had the third-largest increase, up \$70 million (13 percent), led by an increase in rail locomotives.
- Singapore had the next-largest increase, up \$43 million (25 percent), due to increases in motor spirit.
- Japan had the largest decrease, down \$98 million, due to neither automotive diesel nor motor spirit being imported in June 2011.
- Australia had the next-largest decrease, down \$90 million (13 percent). This was due to the import of an offshore patrol vessel, the *HMNZS Wellington*, in June 2010.

Trade balance June 2011 – actual values

In the June 2011 month there was a trade surplus of \$230 million (5.8 percent of exports). This compares with an average deficit of 7.2 percent of exports over the preceding five June months, though there was a surplus of \$221 million in 2010.

For the June 2011 year there was an annual trade surplus of \$1.0 billion (2.2 percent of exports). This compares with an average deficit of 11 percent of exports over the preceding five June years, though there was a surplus of \$593 million in the June 2010 year.

Trend in monthly export values

The trend for export values has increased 29 percent since the most recent low point in October 2009.

The milk powder, butter, and cheese commodity grouping (up 69 percent) has contributed almost half the increase in export values since October 2009. Meat and edible offal (up 24 percent) and logs, wood, and wood articles (up 46 percent), have also been significant contributors to this growth.

Recent changes in trend values of selected export commodity groupings are illustrated in the graph below.

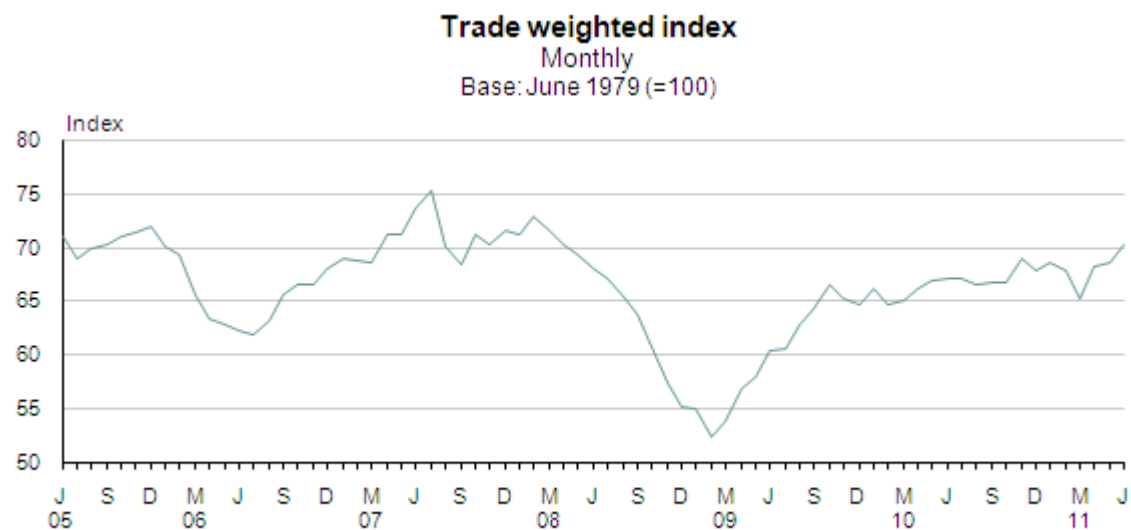

Source: Statistics New Zealand

Exchange rate movements

According to the Reserve Bank's Trade Weighted Index (TWI), the New Zealand dollar was 2.3 percent higher in June 2011 compared with May 2011, and 4.8 percent higher compared with June 2010.

The TWI rose 2.7 percent in the June 2011 quarter, compared with the March 2011 quarter. The TWI was 3.5 percent higher in the June 2011 quarter than it was in the same period of the previous year.

Overseas Merchandise Trade: July 2011 will be released on 24 August 2011.

Technical notes

Definitions

Billion: 1,000 million.

Capital goods: Produced assets used repeatedly or continuously, for longer than one year, in industrial production processes. Examples are machinery, trucks, and aircraft.

Cif: Cost of goods, including insurance and freight to New Zealand.

Consumption goods: Goods used (without further transformation in industrial production processes) by households, government, or non-profit institutions serving households.

Fob: Free on board (the value of goods at New Zealand ports before export).

Infoshare: Free-of-charge online tool that gives you access to a range of time-series data.

Intermediate goods: Goods used up or transformed in industrial production processes.

Merchandise trade: Exports or imports of goods that alter the nation's stock of material resources. Includes goods leased for a year or more. Excludes goods for repair.

Provisional: Statistics for the latest three months are provisional, to allow for the inclusion of late data and amendments.

Re-exports: Merchandise exports that were earlier imported into New Zealand and comprise less than 50 percent New Zealand content by value.

Trade deficit: When the value of imports is more than the value of exports.

Trade surplus: When the value of exports is more than the value of imports.

Vfd: Value for duty (the value of imports before insurance and freight costs are added).

Data source

Data is obtained from export and import entry documents lodged with the New Zealand Customs Service (NZCS). The data is processed and passed to Statistics NZ for further editing and compilation.

Impact of the Christchurch earthquake on 22 February 2011

The Christchurch earthquake on 22 February 2011 resulted in the displacement of the staff who compile overseas merchandise trade statistics. A limited staffing arrangement was temporarily put in place, resulting in less editing of the February and March 2011 data than usual. Additional checking has been undertaken since then, resulting in no significant revision to the data for those months.

Valuations

Exports (including re-exports) are valued fob (free on board) and are shown in New Zealand dollars. Estimated values are used for goods that are not already sold at the time of export entry lodgement.

Imports are valued at cif (cost including insurance and freight) and are shown in New Zealand dollars.

Trade balance values are calculated by deducting imports (cif) from exports (fob). These two valuations are not entirely comparable, because the cif valuation includes insurance and freight to New Zealand while the fob valuation excludes insurance and freight from New Zealand. However, imports in tables 1 and 2 are also shown at the vfd (value for duty) level, which excludes the insurance and freight component.

Exchange rates

Export values given in foreign currencies are converted by Statistics NZ into New Zealand dollars, using weekly exchange rates when the statistics are compiled. For exports, a rise in the New Zealand dollar has a downward influence on prices, quantities, and values.

Import values are converted from foreign currencies when import documents are processed by NZCS. The exchange rates used are set by NZCS each fortnight. These rates are prepared 11 days before the start of the fortnight, so have a lag of 11 to 25 days compared with the daily rates published by the Reserve Bank. For imports, a rise in the New Zealand dollar has a downward influence on prices and an upward influence on quantities. The combined influence on values can be either positive or negative.

Time of recording

Exports

From the August 1997 reference month, exports are compiled by date of export. Previously, exports were generally compiled according to date of clearance by NZCS. This meant that some goods were allocated to the month following their actual month of export. Exports up to July 1997 that were not processed until August 1997 were assigned to the month of August 1997.

From 1 March 2004, NZCS has not allowed goods to be loaded for export until an export entry has been lodged and cleared. A study undertaken in 2001/02 indicated that export entries not being lodged might account for between 1 and 3 percent of exports at that time. There is a possibility that the change in NZCS processes may have reduced this undercoverage, although this has not been quantified.

Imports

Imports are generally compiled by date of entry clearance by NZCS. NZCS entries are required from up to five days before, to 20 working days after, arrival of goods into New Zealand. The exception to this rule is for crude oil imports, which can have entries lodged later than 20 working days after entry into New Zealand.

Crude oil values for the latest month are estimated using actual quantities and country of origin data (provided by NZCS, based on information from the refinery at Marsden Point), together with

estimated prices. These estimates for crude oil are replaced once actual entries are lodged with NZCS.

While all entries are provisional for the latest three months, and have the potential to be changed by the importer/exporter within this period, changes are not common, and generally do not have a material impact on the results. However, New Zealand has only a few ships carrying crude oil arriving each month, and each ship represents a high proportion of the monthly total of imported crude oil. Any variation in the data for crude oil resulting from a later lodgement date can result in a significant revision to the value. Once actual lodgements are received by Statistics NZ from NZCS, the value for crude oil can be regarded as robust.

There were 21 working days in June 2011, compared with 21 working days in June 2010.

Commodity classification

Commodities are classified according to the New Zealand Harmonised System Classification (NZHSC).

The NZHSC was revised from the January 2007 reference month, to incorporate changes promulgated by the World Customs Organization. Details can be found in the *Overseas Merchandise Trade: January 2007* information release published on 26 February 2007.

Standard International Trade Classification

The Standard International Trade Classification (SITC) is an output classification (using Harmonised System (HS) codes at the six-digit level as building blocks), designed by the United Nations as an analytical tool for economic analysis, which includes some simple implications regarding level of processing. Published figures are at a high level of aggregation; more disaggregated information is available on [Infoshare](#). For customised jobs using the SITC Rev 4 classification, contact customer services at: info@stats.govt.nz.

Broad economic category groups

Broad economic category (BEC) groups are arranged, as far as practicable, to align with the System of National Accounts' three basic classes: capital goods, intermediate goods, and consumption goods. Commodities in BEC groups are categorised on the basis of their main end use. This means, for example, that all video recorders are treated as consumption goods even though some are used in business. Similarly, all helicopters are treated as transport equipment even though some are military goods (and are treated as such in the National Accounts).

Trend series

Time series can be split into trend, seasonal, and irregular components. Seasonal adjustment removes the seasonal component, while trend estimation removes the seasonal and irregular components. Trend estimates reveal the underlying direction of movement in a series and are used to identify turning points.

The trend series are calculated using X-12-ARIMA, which adjusts for outlying values and uses a centred moving average. The length of the centred moving average is selected automatically and can be 9, 13, or 23 months, depending on the relative variability of the irregular component compared with the trend. A long moving average has the effect of smoothing the trend series but

slowing the response to underlying changes in growth rates, while a short moving average produces a trend series that is less smooth but quicker to identify turning points.

To improve estimation of the underlying movement, the imports trend is calculated after removal of individual import items that have cif values of \$100 million or more, such as large aircraft and ships. The trade balance trend is calculated by subtracting the imports trend from the exports trend.

Trend figures are recalculated each month. The use of new monthly data means that previously published trend estimates are subject to revision. These revisions mainly affect the latest months, and can be large if a trade value is initially treated as an outlier but is later found to be part of the underlying trend.

Seasonally adjusted series

These are calculated monthly and for calendar quarters, using X-12-ARIMA.

Seasonal adjustment removes the estimated impact of regular seasonal events, such as pre-Christmas purchasing, from time series. This makes the figures for adjacent periods more comparable. Seasonally adjusted figures are estimates and are subject to revision each period, with the largest changes generally occurring in the latest periods.

Further information is on the [Statistics NZ website](#).

Confidential items

Under Section 37A (d) of the Statistics Act, the Government Statistician may disclose details of external trade, movement of ships, and cargo handled at ports. However, Statistics NZ understands that the release of merchandise trade commodity information can, in some cases, place commercially sensitive information in the public domain. Statistics NZ is able to provide a limited form of confidential status for commodity items (at the discretion of the Government Statistician), upon application by a company or business.

In practice, all confidential HS codes are aggregated into the code 9809.00.00.00 in order to protect their confidentiality and to maintain total export and import values. Any aggregations of HS codes below this level, which encompass confidential 10-digit codes, exclude the confidential value(s) for these codes.

The only aggregates that include the confidential codes are total exports, total imports, and the total exports and imports by country.

Concepts

Overseas Merchandise Trade (OMT) statistics are compiled in close accordance with the United Nations' International Merchandise Trade Statistics Concepts and Definitions. OMT data, after adjustment, is used in the Balance of Payments and National Accounts. The adjustments are for coverage, timing, valuation, and classification, and are explained in the [Balance of Payments – Sources and Methods 2004](#) publication.

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports. Imports are valued cif (cost, including insurance and freight to New Zealand) or vfd (value for duty – the value of imports before insurance and freight costs are added). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Individual import items with cif values of \$100 million or more (such as large aircraft and ships).

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports, while imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Values, particularly for the latest periods, are subject to revision each month.

4. Seasonally adjusted values exclude estimated seasonal fluctuations.

5. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

6. Excludes individual import items with (cif) values of \$100 million or more (such as large aircraft and ships).

1. Imports are valued cif (cost, including insurance and freight to New Zealand, in New Zealand dollars).

2. Figures are calculated on unrounded data.

3. Some section values exclude confidential data. (This may affect percentage changes.)

4. Excludes passenger motor cars. (There is a separate series for these because industry and household purchases cannot be split.)

5. Excludes petrol and avgas. (There is a separate series for these because industry and household purchases cannot be split.)

6. For the latest month, values for crude oil and some other petroleum products are calculated from estimated prices.

7. Excludes passenger motor cars, petrol and avgas, and military equipment.

8. Military equipment (including frigates), confidential, miscellaneous, and unclassified goods. Military helicopters are in capital transport equipment.

9. Data that is no longer confidential is assigned to specific BEC groups.

10. Totals may not match merchandise trade totals as some commodities (eg monetary gold) are excluded from BEC.

11. The change from the same period of the previous year.

1. Exports are valued fob (free on board – the value of goods at New Zealand ports before export) and include re-exports, while imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Some section values exclude confidential data. All excluded confidential data is included in section 9 (other).

4. These codes are used in Infoshare series EXPM.SITC1& and IMPM.SITC1& (at position '&') for exports and imports data. No series for balance data.

5. For the latest month, values for crude oil and some other petroleum products are calculated from estimated prices.

6. Commodities and transactions not classified elsewhere in SITC.

7. Totals may not match merchandise trade totals as some commodities (eg monetary gold) are excluded from SITC.

8. Excluding food and fuel manufactures.

1. Seasonally adjusted quantities exclude estimated seasonal fluctuations, but include short-term irregular movements.

2. Seasonally adjusted quantities particularly for the latest periods, are subject to revision each quarter. Re-exports are included.

3. This quantity series is not directly comparable to the equivalent value series in table 11. See 'HS codes' in the tables for differences.

4. This series is not seasonally adjusted. This is because it does not have stable seasonality. Statistics for the latest three months are provisional.

5. There is no single, consistent, unit of quantity available for this category.

1. Values, particularly for the latest periods, are subject to revision each month.

2. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

3. This quantity series is not directly comparable to the equivalent value series in table 14. See 'HS codes' in the tables for differences.

4. Trend estimates are not calculated for this series because it does not have stable seasonality. Statistics for the latest three months are provisional.

5. There is no single, consistent, unit of quantity available for this category.

1. Imports are valued cif (cost, including insurance and freight to New Zealand). All values are in New Zealand dollars.

2. Figures are calculated on unrounded data.

3. Values, particularly for the latest periods, are subject to revision each month.

4. Trend values exclude estimated seasonal fluctuations and short-term irregular movements.

5. Trend estimates are not calculated for this series because it does not have stable seasonality. Statistics for the latest three months are provisional.

6. Excludes individual import items with (cif) values of \$100 million or more (such as large aircraft and ships).

1. Seasonally adjusted quantities exclude estimated seasonal fluctuations, but include short-term irregular movements.

2. Seasonally adjusted quantities particularly for the latest periods, are subject to revision each quarter. Re-exports are included.

3. This quantity series is not directly comparable to the equivalent value series in table 12. See 'HS codes' in the tables for differences.

4. This series is not seasonally adjusted. This is because it does not have stable seasonality. Statistics for the latest three months are provisional.

5. There is no single, consistent unit of quantity available for this category.

HS – New Zealand Harmonised System Classification. (HS2007 applies to January 2007 and later data.)

1. Imports are valued cif (cost, including insurance and freight to New Zealand, in New Zealand dollars). Figures are calculated on unrounded data.

2. Seasonally adjusted values exclude estimated seasonal fluctuations, but include short-term irregular movements.

3. Seasonally adjusted values, particularly for the latest periods, are subject to revision each quarter.

4. Excludes passenger motor cars. (There is a separate series for these because industry and household purchases cannot be split.)

5. Excludes petrol and avgas. (There is a separate series for these because industry and household purchases cannot be split.)

6. This series is not seasonally adjusted. This is because it does not have stable seasonality.

7. For the latest month, values for crude oil and some other petroleum products are calculated from estimated prices.

8. Excludes passenger motor cars, petrol and avgas, and military equipment.

9. Military equipment (including frigates), confidential, miscellaneous and unclassified goods. Military helicopters are in capital transport equipment.

10. This total series may not equal the sum of its parts because it is seasonally adjusted directly, and is calculated from total Harmonised System (HS) data, while the categories use BEC data – some HS commodities (eg monetary gold) are excluded from BEC.
